## **DETAILED ACTION**

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 14-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 14, it is not clear what is meant by the work function of the first metal of the alloy layer. Examiner understands "alloy," to mean a mixture of two or more metals rather than a layered or laminated set of distinct layers. How would one measure (or calculate) the work function of the first metal in a mixture? Is this the work function of the first metal, as determined by a homogeneous layer of the metal (a layer having only that material)? Or does one determine the work function of the alloy layer (or the mixture layer) and then somehow separate out some part of that work function and attribute that part of the work function to the first metal? In other words, in a mixture of, say, aluminum and gold, the work function of the mixture is not simply a sum of the work functions of pure aluminum and of pure gold, because the bond structure of the alloy differs from the bonding in pure aluminum and pure gold. So if the claim intends to specify a contribution of the first metal to the work function of the alloy layer, it is not clear how that work function would be determined. (The specification seems to imply that this is indeed the intention, but the usual meaning of the term work function would apply to the pure material, and the specification could simply be using the term to have its usual meaning.)

Application/Control Number: 10/619,565

Art Unit: 2811

The prior art cited on form PTO 892 teaches to match ionization potential of the electrode material to that of the organic conducting material.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to S. Crane, whose telephone number is (571) 272-1652.

The supervisor for Art Unit 2811, Eddie Lee can be reached on (571) 272-1732. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
